REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: in follow up to the interview on 10 November 2003, a second look was taken at the primary reference, Angell et al (US 5,855,809). Applicant's assertions regarding the fact that Angell et al discloses a reversible oxidation-reduction process are agreed with. Particularly, the Examiner agrees with the argument regarding the produced halogen. If a halogen were produced at the anode, as is presently claimed, the reaction would not be reversible, as is disclosed by Angell et al. Thus, Applicant's assertion that the process of Angell et al does not encompass an electrolytic reaction, and thereby, an electrolytic cell, is true. Therefore, Angell et al fails to teach the invention as claimed. In addition, there is no motivation in Angell et al to use the electrolyte in an electrolytic method for producing an alkali metal because (as can be seen in Angell et al at col. 5, lines 35-40) the electrolyte of Angell et al is specifically designed to be used in methods where reversibility of the reaction is required, e.g.-rechargeable electrochemical cells, fuel cells, batteries, etc. Thus, Angell et al does not teach the invention as claimed, and fails to provide motivation to arrive at the present invention. Therefore, independent claims 1, 13 and 23 are allowable over Angell et al. For at least these reasons, dependent claims 2-12, 14-22 and 24-32 are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
